

*Craig Harclerode* is a 35 year O&G industry veteran in the use of automation and information technologies to improve the performance and profitability of O&G and Petrochemical organizations. He is a global O&G industry visionary and thought leader who is experienced in assessing current use of information and automation technologies, developing strategies and plans to drive business value, and improving organizational efficiency and sustainability defined by a company's ability to adapt and endure over time.

Craig's career has included a variety of operations, management, executive management, and consultative positions at O&G companies (Amoco/BP) and solutions providers (Honeywell and AspenTech).

In his current role as the Global O&G Industry Principal at OSIsoft, Craig consults with O&G companies globally on how the PI System can add value to their organizations as a strategic real-time integration and applications infrastructure.

Mr. Harclerode has published articles on sustainability in O&G, evolutionary MES, and value chain integration and real-time situational awareness.

He holds a BS in Chemical Engineering with honors from Texas A&M University and an MBA from Rice University.
