

Tom Anderson is a Senior Systems Engineer with the SAS US Energy Division. His 20+ years of analytical experience includes 14 years with SAS with a focus on advanced analytics and data management in both Utilities and Oil and Gas. Recent achievements include solutions in Asset Performance Analytics in both upstream and downstream applications.

Abstract:

Process manufacturing provides many challenges in managing performance, efficiency and safety. Examining critical assets of various configurations over a 14 to 18 months. SAS provided the ability to not only identify equipment with challenges but examine the detail operations of equipment and measure performance over time. This solution provides manufacturers with advanced analytics and more descriptive visuals to promote the health and safety of the asset, the process, and those individuals who are part of the community that our assets reside in.

The SAS Solution provides:

- Root Cause Analysis
- Performance Measures
- Alerts
- Historical reference
