

Diana Shaw is an Analytical Consultant with SAS' Global Professional Services & Delivery focused on their Supply Chain Solutions. Prior to joining SAS, Diana completed a Master of Science in Analytics at North Carolina State University Institute for Advanced Analytics. She has seven years of experience working in the energy efficiency business with Honeywell Building Solutions and Schneider Electric. Her primary responsibilities were conducting energy usage audits, developing facility optimization projects and calculating energy cost savings via energy modeling and time series forecasts. Diana also has six years working in steel industry. She started her career as an ironmaking process engineer and foreman. Later she moved into technical sales providing technical support and cost-benefit analysis for steel used into automotive parts and bridge manufacturing.
